.4 miles round trip. Elevation gain of 60 feet and loss of 60 feet. Elevation at the trailhead at 2,519 feet, highest point is at 2,575 feet. Lowest elevation is 2,519 feet.

Review: October 10, 2009

Twin Firs Trail is an out and back trail that goes about .2 miles into the woods.

The trail goes along the side of a large cedar tree that has fallen down and makes a left off through the woods. Walk through a fairly wide trail past some huge old growth trees that have been here long before the park was established. Cedars like damp soil and the presence of moss-covered trees, ferns, and Devil's club prove the soil here is moist here throughout the year.

Soon you'll come upon trees that have grown out of a dead tree that became a nurse log. You can tell that the trees started on a nurse log because of the way the root structure fan out about 4 or 5 feet

above the ground with the rotted remains of the nurse log underneath the young trees.

The trail that goes about .2 miles into the woods, climbs a hill, and ends at a large deadfall. Listen for the sound of a small creek gurgling nearby.

This trail is safe for small children but take care if they climb on any logs because many of them are slippery and have sharp points from branches that have broken off.

Enjoy the Photos!
